

Essential Commands

 **POCKET COMMAND CARD**
You do not need every command—only the ones that get you home alive.

You do not need to memorize everything. These commands cover most of a new survivor's needs, including the popular need to flee whatever is currently making that noise behind you.

Travel

Command	Purpose
<code>/spawn</code>	Return to the server spawn
<code>/rtp</code>	Find a random safe location in the world
<code>/sethome</code>	Set your current location as a home
<code>/home</code>	Return to your home
<code>/tpa <player></code>	Ask to teleport to another player
<code>/tpahere <player></code>	Ask another player to teleport to you
<code>/tpaccept</code>	Accept a pending teleport request
<code>/tpdeny</code>	Decline a pending teleport request
<code>/back</code>	Return to a previous location, when your rank permits it

Never use teleport requests to escape fair combat, bypass access controls, or enter a base without permission.

Communication

Command	Purpose
<code>/ch global</code> or <code>/ch g</code>	Makes global your active channel
<code>/ch local</code> or <code>/ch l</code>	Makes local your active channel

<code>/msg <player> <message></code>	Send a private message
<code>/r <message></code>	Reply to your latest private conversation
<code>/ignore <player></code>	Hide messages from a player
<code>/discord</code>	Open the PlagueMC Discord information

Private messages are still subject to server rules.

Economy & play

Command	Purpose
<code>/balance</code>	Check your current balance
<code>/pay <player> <amount></code>	Pay another player
<code>/baltop</code>	View leading balances
<code>/sit</code>	Sit where supported
<code>/lwc</code>	Show container-protection help
<code>/crates</code>	Open Crates shop interface

The economy is player-facing: agree on prices before trading and verify names and amounts before confirming payments.

Help & discovery

- Use `/help` for general command help.
- Add `?` or use a plugin's help subcommand when available.
- If a listed command is unavailable to your rank, do not spam it—check the relevant guide or ask staff.

Commands and permissions evolve with the server. This page documents the useful baseline; the server keeps several less merciful verbs to itself.
